ABOUT ME

I am motivated Software Engineer and IT undergraduate at SLIIT with industry experience as an Intern Software Engineer at GlenzSoft (Pvt) Ltd. Seeking an opportunity to further build a career in the Software Engineering industry by applying technical expertise and continuously expanding knowledge across all stages of the Software Development Life Cycle (SDLC). Through academic coursework, industry exposure, and personal projects, developed strong skills in full-stack development, AI/ML-powered solutions, API integration, and scalable application design. Passionate about building intelligent, high-performance systems with a strong focus on clean architecture, problem-solving, and delivering real-world impact through technology.

Education

Sri Lanka Institute of Information Technology – SLIIT

BSc (Hons) in Information technology Specializing in Information Technology(June 2022 – 2026)

G.C.E. (Advanced Level) Examination | Physical Science

Kandy Girls' High School | 2018 – 2020

G.C.E. (Ordinary Level) Examination

K/Viharamahadevi Girls' College|2017

Work Experience

Intern Software Engineer | Glenzsoft (pvt)Ltd (June 2025-april 2026)

- Architected and delivered enterprise-grade POS and Line-of-Business (LOB) systems with optimized MySQL backends, cutting operational query times and significantly boosting overall system performance.
- Engineered cross-platform mobile inventory applications using .NET MAUI and Firebase, enabling real-time bidirectional data synchronization across Android and iOS platforms.
- Accelerated application responsiveness through advanced database query optimization, indexing strategies, and targeted code refactoring — reducing load times and improving end-user experience.
- Designed, built, and documented RESTful APIs with Swagger/OpenAPI specifications, enabling clean and reliable third-party system integrations.
- Led client-facing technical support and requirement analysis sessions, translating complex business needs into robust software specifications and achieving consistently high customer satisfaction.
- Collaborated within cross-functional Agile teams to deliver scalable, maintainable solutions on schedule — contributing to code reviews, sprint planning, and continuous delivery workflows.

PROJECTS & Research

EcoGarden- AI & IoT-Based Home Garden Monitoring & Organic Fertilizer Recommendation System | July 2025 - June 2026 | Research

Tech Stack: Python, TensorFlow, OpenCV, Scikit-learn, Random Forest, CNN, LSTM, K-Means Clustering, Flutter, FastAPI, MongoDB, Railway, ESP32, MQTT, Docker

- Designed and developed a full-stack AI + IoT smart gardening platform to monitor plant health, predict growth stages, estimate crop yield, and deliver real-time organic fertilizer recommendations.
- Engineered an end-to-end IoT data pipeline using ESP32 sensors to capture soil and environmental parameters (moisture, temperature, humidity, light, NPK nutrients) and stream data to cloud services.

- Implemented CNN-based computer vision models for automated plant identification, disease detection, and nutrient deficiency analysis through image processing pipelines.
- Integrated CNN-LSTM architecture for intelligent plant health monitoring and lifetime prediction, reaching ~95% overall system analytical accuracy.
- Built and deployed a cross-platform Flutter mobile app connected to FastAPI + MongoDB + Railway infrastructure, providing real-time dashboards, smart alerts, and decision-support tools.

NeatNest Home Inventory Management System

(May 2025)

- Technologies used: MERN Stack, Tailwind CSS, PostgreSQL, Postman, GitHub
- Develop a Home Inventory System Management with AI-powered recommendations for inventory management, expense management, smart analytics & insights and AI-powered recommendations.
- Contributions (Analytics and Insights): Design and test a system for analytics, stock tracking and graphs with CRUD operations, validation, report generation, and automation using Postman.

TalentNest Education platform

(May 2025)

- Technologies used: React, MongoDB
- Objective: Simple web application for students' educational purpose. React was used to implement the frontend along with Bootstrap, and MongoDB was used for storing data and user authentication.
- Implemented: Like, comment, save the post in bookmarks, add, edit, and delete tasks, and Profile management.
- Upcoming: Enable adding chatbot for the interact management.

UI/UX REDESIGN FOR Flower Bangkok WEBSITE

(Oct 2024)

- Technologies used: Figma, User Research and Analysis
- Objective: To improve the usability and functionality of the best flowers and gifts website by identifying key user pain points through interviews and redesigning critical interfaces, focusing on enhancing the overall user experience and navigation across the platform.
- Contribution: Conducted user interviews and designed Figma prototypes for the Sign-Up, Product, and Save Cart pages, contact us page, enhancing Create and Update functionalities while addressing usability issues such as confusing navigation, unclear buttons, and low responsiveness.

TECHNICAL SKILLS

- **Programming Languages** : Python, Java, JavaScript, PHP, Kotlin, R, C++
- **Frontend Development** : React, Bootstrap, HTML, CSS, Figma
- **Backend Development** : Node.js, MongoDB, Firebase, MySQL, API Integration, SQLite, Laravel
- **Tools / IDEs** : Visual Studio, Eclipse, R Studio, Jupyter Notebook
- **Version Control** : Git, GitHub
- **Project Management Tools** : Jira, Trello, Agile

CERTIFICATIONS & TRAINING

AWS Certified Cloud Practitioner

- Microsoft Azure AI Fundamentals
- AWS Certified Developer – Associate

CLOUD PLATFORM PROFICIENCY

- AWS: EC2, S3, VPC, RDS, Lambda, CloudFormation
- Azure: Virtual Machines, Virtual Networks
- Practical Training: AWS Skill Builder / Microsoft Learn

LANGUAGES

English (Full professional proficiency)

Sinhala (Native or bilingual proficiency)

Tamil (Native or bilingual proficiency)
